

U.S. Gulf Coast Operations Fact Sheet

Oil and Gas Production - Gulf of Mexico

- Chevron is one of the largest producers in the Gulf of Mexico.
- For more than 60 years, Chevron has been subjected to weather related challenges in the Gulf of Mexico. The company has a long history of safety and environmental stewardship when it comes to safely evacuating its employees.
- Chevron is the largest leaseholder on the Outer Continental Shelf in the Gulf of Mexico.
- Currently, Chevron has approximately 300 major structures on the Outer Continental Shelf and approximately 680 total structures in the Gulf, including satellite wells and caissons.
- There are approximately 3,000 Chevron employees and contractors working in the Gulf of Mexico.

Downstream - Pascagoula Refinery

- The Pascagoula Refinery is located near Pascagoula, Mississippi.
- Approximately 330,000 barrels of crude oil are processed daily at the refinery, all arriving via ship.
- Roughly 1,250 employees work at the Pascagoula Refinery each day.
- Pascagoula produces gasoline, jet fuel, diesel and petroleum based chemicals. Thirty-six percent of the crude oil that comes into Pascagoula is refined into gasoline.
- The refinery processes 3,500 barrels of crude oil per hour and produces 5 million gallons of gasoline each day.
- Sixty percent of the refined fuels leave the refinery via pipeline.

Pipeline Operations

- Chevron Pipe Line Company owns and/or operated approximately 7,500 miles of regulated and non-regulated pipelines onshore and offshore in Texas, Louisiana, Mississippi, Alabama and in the OCS that transport crude oil, natural gas and other products.

- Chevron also owns and/or operates natural gas storage facilities and bulk oil terminals in the Gulf Coast region and manages commercial and transportation functions for those facilities.

Empire Pipeline Terminal

- Chevron Pipe Line Company's Empire Pipeline Terminal is located in far southern Louisiana, on the east bank of the Mississippi River.
- The terminal is a hub that receives oil via pipelines from production facilities in the Gulf of Mexico and delivers oil via pipeline and barge for destinations along the Gulf Coast. The terminal can handle up to 350,000 barrels of oil per day, roughly 20 percent of Gulf of Mexico oil production.
- Currently, the Empire Terminal handles between 230,000 and 275,000 barrels of oil per day. There remains significant volume of Gulf of Mexico oil production that has yet to be restored following the 2005 hurricanes.
- Current storage capacity at the terminal is close to 1.3 million barrels of oil.
- Chevron Pipe Line Company typically has 15 employees at the Empire Pipeline Terminal each day. Since the 2005 hurricanes, a temporary workforce of roughly 160 workers have been onsite engaged in repair work at the terminal.
- In addition to having on-site personnel 24/7, the facility is monitored real time from a state-of-the-art control center in Houston, TX.

Fourchon Terminal

- Fourchon Terminal is located in Point Fourchon, LA. The terminal handles 50,000 barrels per day of Gulf of Mexico crude oil production, serving as another critical entry point into the US supply.
- Currently the facility handles about 35,000 barrels per day due to lower volumes being produced in the Gulf of Mexico after the 2005 hurricanes.

The Henry Hub

- Through its regulated subsidiary Sabine Pipe Line LLC, Chevron owns and operates the Henry Hub, the most active natural gas trading center in North America. Currently 1.8 billion cubic feet of natural gas can be transported through the Hub.
- Henry Hub is located south of Erath, LA.

Port Arthur Lubricants Plant (PALP)

- Chevron's PALP is located approximately 10 miles from the Gulf Coast, in Southeast Texas.
- The facility is responsible for producing 300,000 gallons of blended lubricants and greases each day.
- PALP ships 35 package trucks daily, in addition to 25 bulk trucks.
- There are 123 Chevron employees who work at the facility and 95 contract employees.

Oronite

- Chevron's Oronite facility is located 50 miles from the Gulf Coast in Belle Chasse, Louisiana, on the Mississippi River.
- There are over 360 Chevron employees and 100 contractors who work at the facility.
- Oronite produces more than 70 million gallons of finished product blends annually.
